

Skills Summary

- **Programming & Frameworks:** Python (NumPy, Pandas, TensorFlow, Scikit-learn, Hugging Face, LangChain)
- **Databases and Visualization:** SQL (MySQL, PostgreSQL, Microsoft SQL Server), Power BI, Matplotlib, Seaborn
- **Machine Learning:** Supervised Learning, Unsupervised Learning, Regression, Classification, Clustering, Feature Engineering, Feature Selection, Model Evaluation, Hyperparameter Tuning XGBoost, Random Forest, SVM
- **Artificial Intelligence:** Deep Learning, CNN, ANN, RNN, LSTM, NLP, Generative AI, LLMs, RAG, FAISS
- **Cloud Platform:** Microsoft Azure, AWS
- **Tools & Technologies:** Git, GitHub, Jupyter Notebook, VS Code, Streamlit, Docker, Prompt Engineering

Experience

AI/ML Engineer

01/2025 – Present

[MAK {Byte}](#)

- Developed and optimized Machine Learning and Deep Learning models using Python, Scikit-learn, TensorFlow, and PyTorch, improving prediction accuracy by up to 18% through feature engineering and hyperparameter tuning.
- Built and trained ANN, CNN, and NLP-based models on datasets containing 50K+ records, achieving model accuracies of up to 92% while reducing training time through efficient data preprocessing.
- Deployed ML applications using, Docker, and AWS, enabling real-time inference with response times under 300ms and supporting scalable AI solutions.

Machine Learning Engineer

08/2024 – 12/2024

[Wow Infobiz](#)

- Built and evaluated 10+ ML models (Logistic Regression, Linear Regression, Decision Trees) using Python & scikit-learn, improving accuracy by 20%+ feature engineering and Hyperparameter Tunning.
- Analyzed 10K+ records using pandas & NumPy, automating preprocessing workflows and reducing manual effort by 40%.
- Created Power BI & matplotlib dashboards, accelerating data-driven decisions by 30%.

Personal Projects

AI Video Agent | [Link](#)

- Built a RAG-based AI Video Agent using LLMs (OpenAI/Llama), LangChain and CromaDB, enabling context-aware responses with 85%+ retrieval accuracy across documents.
- Implemented document ingestion, chunking, and vector embeddings using Python, Hugging Face, and Sentence Transformers, reducing hallucinations by 30%.

Movie Recommendation System | [Link](#)

- Developed an AI-powered Movie Recommendation System using Python, Pandas, Scikit-learn, TF-IDF, and Cosine Similarity, processing a dataset of 45,000+ movies to generate personalized recommendations.
- Engineered content-based recommendation pipelines using movie metadata, achieving 90%+ recommendation relevance while returning results in under 500 ms.
- Built and deployed the application using Streamlit, serving recommendations through a responsive web interface.

Diabetes Prediction System | [Link](#)

- Built a Diabetes Prediction System using Python, scikit-learn, and XGBoost, achieving 88–92% accuracy through feature engineering and hyperparameter tuning.
- Performed EDA and preprocessing on 10K+ patient records using pandas, NumPy, improving model performance by 18% over baseline Logistic Regression.

Education

- **University of Mumbai**
Bachelor of Engineering
Computer Science and Engineering (AI and ML)
CGPI: 8.43/10

Mumbai, India
June 2022 – May 2026
